

—— Retail Trade Index

Retail Trade Index

Data is based on May 2023

Documentation of the statistics

- The data used in this presentation is based on The Retail Trade Index from Statistics Denmark.
- The Retail Trade Index shows the development in turnover within the retail trade sector. The statistics is published monthly and is primarily used as a short-term indicator for private consumption as well as the general business cycle movement.
- The statistics are based on survey data from all large retail trade enterprises and a sample of the remaining retail trade enterprises, which are requested to submit information about their turnover each month.
- The statistics cover retail trade in Denmark by Danish retail trade enterprises, excluding Greenland and Faroe Islands. Foreign enterprises with retail trade with Danish consumers (e.g. near-border enterprises or foreign internet shops) are not included in the statistics.
- The first published figures for a given month are published 20-22 days after the end of the reference period. Due to the short production time the data is exposed to revisions.
